

The Global Parking Solution

ParkHelp's Global Solution gives car parks a competitive advantage by placing the **end customer's experience first and foremost**. A parking facility equipped with our **Intelligent Guidance System** guarantees a much shorter time span between arrival at the site and parking your car.

Our Global Parking Solution focuses on every aspect of the **management and control of the car park** by offering many interconnected features. It **allows License Plate Recognition of the vehicles** at entry/exit, thus **avoiding security threats**, offers **accurate ultrasound or camera-based indoor parking guidance**, **reliable outdoor parking guidance**, and **optimal illumination** for energy saving and **increased security**.

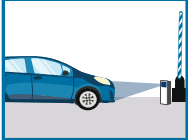

ParkManager

ParkManager is a **control and monitoring software** that **collects all the information** gathered by our sensors and allows parking operators to know everything about their parking facilities at a glance. Furthermore, it **stores historic data on the usage of the parking facilities** to ease decision-making and predict future trends. ParkManager software is the key element designed to obtain data about parking mobility and behaviour and **to use it to measure and compare the impact of marketing campaigns** on the facilities.

License Plate Recognition

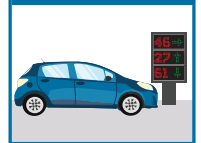

License Plate Recognition

- Accurate License Plate Recognition at entries/exits
- Increased security & control
- Avoids ticket fraud & vehicle damages
- Black & white lists management

Signage

- Indoor & Outdoor
- Accurate real-time information about the available parking spots & directions
- Reliable guidance for drivers

Signage

Indoor PGS

Indoor PGS

- Modular ultrasound solution adaptable to any parking layout
- Easy, fast plug & play installation
- RGB leds for each space
- Visible pilot light from any point of the facilities

Pass Counter

- Detects & controls vehicle flow inside the facilities
- Accurate vehicle counting
- Real-time updated information on the displays

Pass Counter

Camera-based PGS

Camera-based PGS

- License Plate Recognition at each parking space and increased security with video surveillance
- Accurate parking guidance with added features
- Completely sealed (IP65 & IP67) aesthetic sensor
- Controls up to 4 parking spots per sensor

Outdoor PGS

- Earth magnetic field detection sensor
- Accurate parking guidance for open parking facilities. No civil work needed
- Occupancy data automatically fed to display signs strategically located
- IP67: suitable for saline environments and continual exposure to UV rays

Outdoor PGS

Lighting

Lighting

- Save energy consumption up to 75%
- Adaptable light quantity and intensity
- Schedule automatic lighting
- Set different schedules according to vehicle flow inside the facilities
